$$\nabla^2 \vec{E} - \mu_0 \epsilon_0 \epsilon_r \frac{\partial^2 \vec{E}}{\partial t^2} = 0$$

Equazione
delle onde

$$n^2 = \epsilon_r$$

Rifrazione visione indice di rifrazione

$$n^2 = \epsilon_r$$

$$\vec{E}_o e^{ik_o z}$$

$$\vec{E} e^{ikz}$$

$$\vec{E} = \frac{2}{n+1} \vec{E}_o \quad \text{Fresnel}$$

$$k = nk_o$$

Equazioni Maxwell: visione sorgenti

$$\vec{D} = \varepsilon_0 \vec{E} + \vec{P}$$

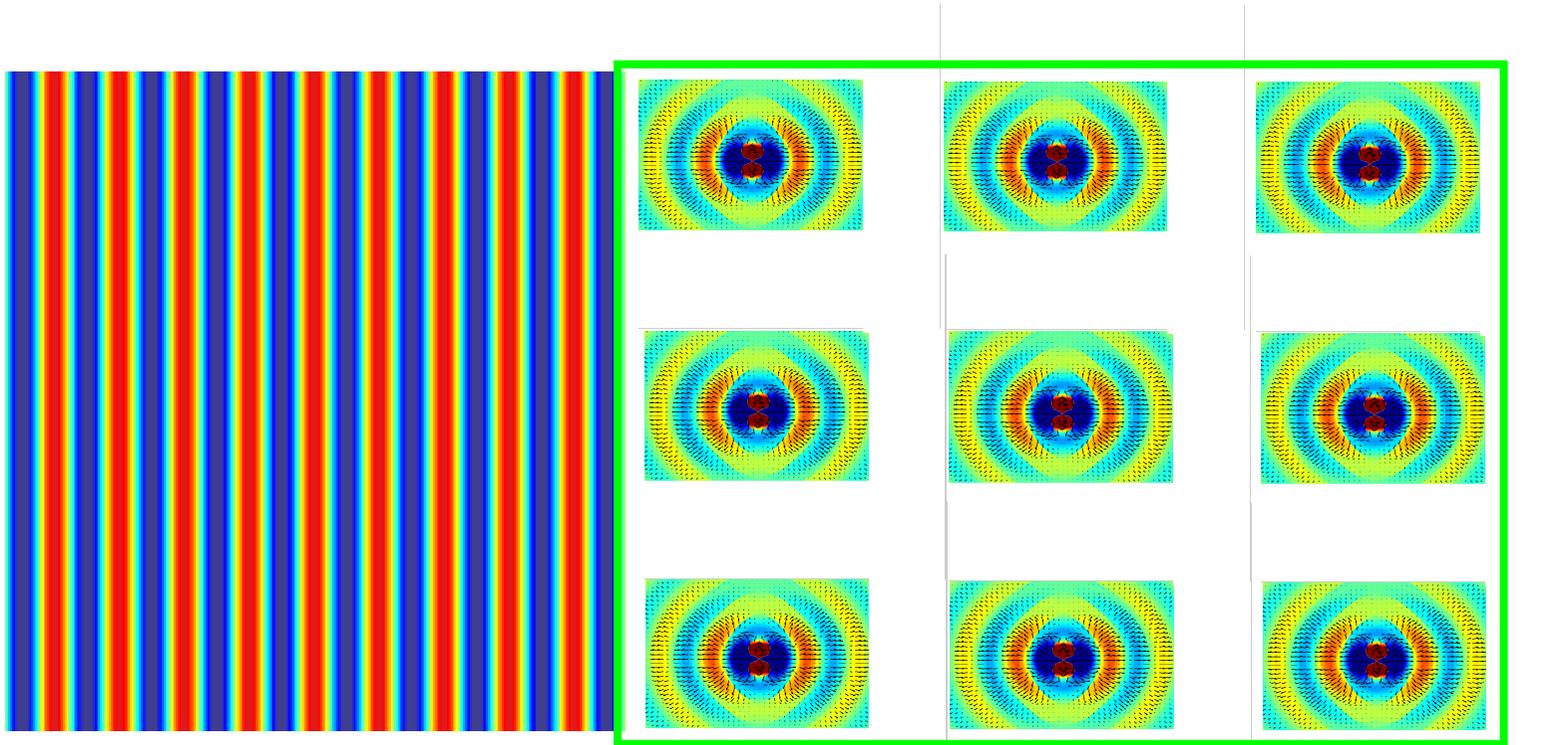

$$\vec{\nabla} \cdot \vec{E} = 0 \quad \vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t}$$

$$\vec{\nabla} \times \vec{B} = \mu_0 \varepsilon_0 \frac{\partial \vec{E}}{\partial t} + \mu_0 \frac{\partial \vec{P}}{\partial t}$$

$$\nabla^2 \vec{E} - \mu_0 \varepsilon_0 \frac{\partial^2 \vec{E}}{\partial t^2} = \mu_0 \frac{\partial^2 \vec{P}}{\partial t^2}$$

Equazione
delle onde
con sorgenti

Rifrazione visione sorgenti

$$\vec{P} = \frac{\sum_i \vec{p}_i}{\Delta V}$$

$$\vec{p}_i = \alpha \vec{E}_i$$

Relazioni fenomenologiche

$$\frac{\rho\alpha}{3\varepsilon_0} = \frac{n^2 - 1}{n^2 + 2}$$

Lorentz-Lorenz

$$n^2 = \frac{1 + \frac{2\rho\alpha}{3\varepsilon_0}}{1 - \frac{\rho\alpha}{3\varepsilon_0}}$$

Clausius-Mossotti

Teorema ottico o di estinzione Ewald-Oseen

Visione sorgenti

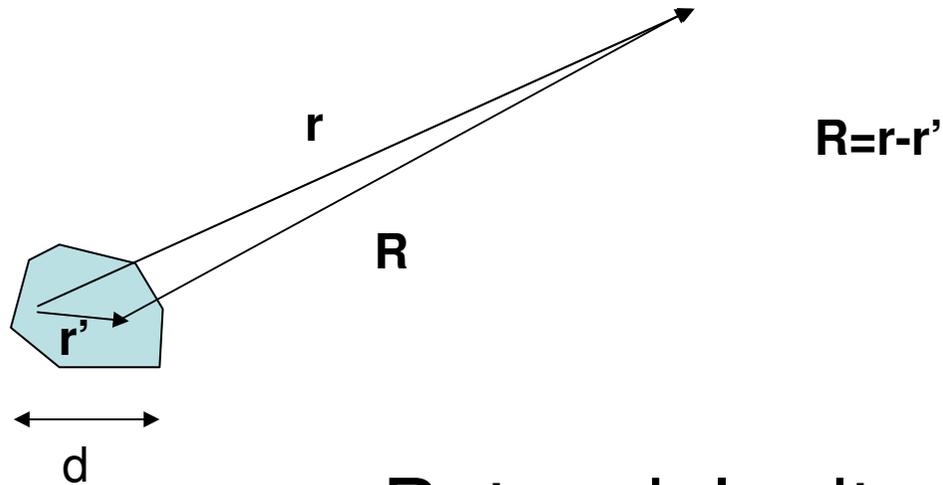

Equazioni Maxwell nel vuoto

$$\vec{\nabla} \times \vec{B} = \mu_0 \varepsilon_0 \frac{\partial \vec{E}}{\partial t} \quad \vec{B} = \vec{\nabla} \times \vec{A}$$

$$\vec{E} = i \frac{c^2}{\omega} \vec{\nabla} \times \vec{B} = i \frac{c^2}{\omega} \vec{\nabla} \times (\vec{\nabla} \times \vec{A})$$

Tutto è ricavabile a partire dal potenziale vettore

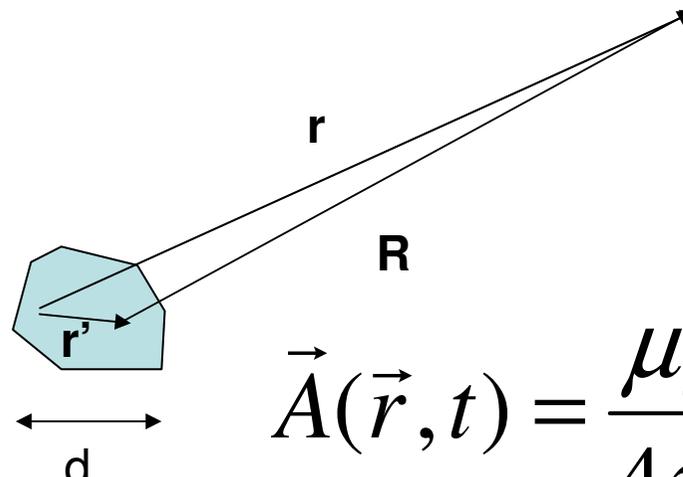

Corrente localizzata variabile nel tempo

Potenziale ritardato

$$\vec{A}(\vec{r}, t) = \frac{\mu_0}{4\pi} \int_V \frac{\vec{J}(\vec{r}', t - R/c)}{R} dV$$

Corrente localizzata variabile nel tempo

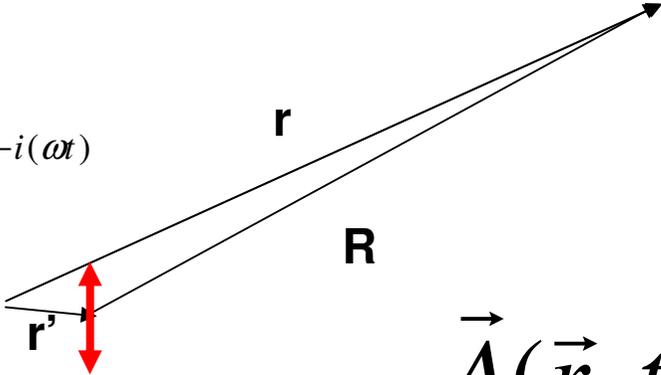

The diagram shows a localized current source represented by a light blue irregular shape on the left. A vector \vec{r}' points from the center of the source to a point \vec{r} on its surface. A horizontal double-headed arrow below the source is labeled d . A vector \vec{R} points from the source to an observation point. A vector \vec{r} points from the observation point back to the source. The relationship $\vec{R} = \vec{r} - \vec{r}'$ is indicated to the right of the diagram.

$$\vec{A}(\vec{r}, t) = \frac{\mu_o}{4\pi} \int_V \frac{\vec{J}(\vec{r}')}{R} e^{-i\omega(t-R/c)} dV$$

$d \ll \lambda$

$$\begin{aligned} \vec{A}(\vec{r}, t) &= \frac{\mu_o}{4\pi} \frac{e^{i(k_o R - \omega t)}}{R} \int_V \vec{J}(\vec{r}') dV \\ &= \frac{\mu_o}{4\pi} \frac{e^{i(k_o R - \omega t)}}{R} I_o \hat{e} \end{aligned}$$

Dipolo elettrico variabile nel tempo

$p(t) = p_o e^{-i(\omega t)}$

$\vec{A}(\vec{r}, t) = \frac{\mu_o}{4\pi} \frac{e^{i(k_o R - \omega t)}}{R} I_o \hat{e}$

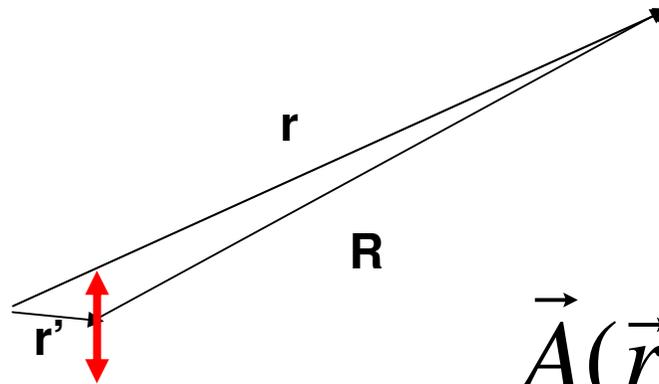

$R = r - r'$

$d \ll \lambda$

$$q(t) = \int I dt = \int I_o e^{-i(\omega t)} dt = \frac{I_o e^{-i(\omega t)}}{-i\omega}$$

$$p(t) = p_o e^{-i(\omega t)} = q(t) d \quad I_o = -i\omega p_o$$

Dipolo elettrico variabile nel tempo
